<b>CHAPTER ONE</b>	
1.Introduction – Crude Petroleum	1
1.1 Hydrocarbon	1
1.2 Paraffin/Wax	3
1.3 Bitumen	4
1.4 Aromatics	5
2 Crude Oil Evaluation	5
2.1 Physical Properties	5
2.1.1 Specific Gravity	5
2.1.2 Boiling Point	6
2.1.3 Pour Point	6
2.1.4 Viscosity	7
2.1.4.1 Viscosity Measurement	7
2.1.4.2 Rheology	8
2.2 Chemical Properties of Crude Oil	9
2.2.1 Thermal Reactions	9
2.2.2 Oxidation Reactions	10
2.3 Crude Oil constituents other than hydrocarbons	10
2.3.1 Sulphur Compounds	10
2.3.2 Oxygen Compounds	11
2.3.3 Nitrogen Compounds	11
2.3.4 Inorganic Compounds	11
3. Waxy Crude Oil	11
3.1 Paraffin Treatment	13
3.2 Chemical Treatment of Paraffin	15
3.3 Method of Chemical Treatment of Paraffin	15
3.3.1 Batch Treatment	15
3.3.2 Continuous Treatment	16
3.3.3 Co-application of Paraffin Chemicals and Demulsifier Chemicals	16
3.4 Paraffin Wax Control	17
3.5 Formation and Characterization of Wax Deposits	17
3.5.1 Wax Content	18
3.5.2 Molecular Weight Distribution of Paraffin	19
3.5.3 Wax Appearance Temperature (Cloud Point)	19
3.5.4 Rotational Viscometry	19

3.5.5 Pour Point	20
3.5.6 Yield Stress	20
3.6 Transportation of Waxy Crude Oil by Pipeline	21
3.7 Pumpability Characteristics of Waxy Crude Oil	22
3.8 Available Shear Stresses	23
3.9 Prevention and Management of Wax Deposition	24
3.9.1 Mechanical Treatment	24
3.9.1.1 Pigging	24
3.9.1.2 Through Flow Line Cutting	25
3.9.2 Thermal Treatment	25
3.9.2.1 Add or Maintain Heat to Stay above Cloud Point	25
3.9.3 Chemical Treatment	25
3.9.3.1 Preventing or Slowing Formation of wax Deposition	25
3.9.3.2 Decreasing the Pour Point	26
3.9.3.3 Solvents to Dissolve Wax Deposits	26
3.9.3.4 Chemicals to Induce Heat	26
3.10 Dynamic Rheological Analysis	26
4 Sudanese Crude Oil (Nile Blend)	27
<b>CHAPTER TWO</b>	
2 Material and Methods	29
2.1 Materials	29
2.1.1 Collection and Preparation of crude oil samples	29
2.1.2 Chemicals	29
2.1.3 Apparatus and Instruments	29
2.2 Methods	30
2.2.1 Determination of Pour Point	30
2.2.2 Determination of API Gravity and Relative Densities by Hydrometer	30
2.2.3 Determination of free water and sediments by Centrifuge	32
2.2.4 Determination of Viscosity	34
2.2.5 Determination of Wax Content by Column Chromatography	36
2.2.6 Determination of wax carbon number by Gas Chromatography	36
2.2.7 Thermal transition analysis by DSC	38
2.2.8 Determination of yield stress	38
<b>CHAPTER THREE</b>	
3.1 Results and Discussion	41
3.2 Conclusion	66
3.3 Recommendation	66
<b>REFERENCES</b>	67

## TABLES

Table	Page
1. Physical Properties of Heglig, Unity, El-Narr, Toma South, El-Toor, and Bamboo	42
2. Pour Point of crude oil for different fields	43
3. Percentage contributions of different field in Nile blend	44
5. Effect of heat treatment on viscosity of Nile blend	64

## FIGURES

Figure	Page
1. Petroleum Fluids Component	3
2. Hydrocarbons Chains	4
3. Shear Rate Vs Shear Stress	9
4. Viscosity Mechanism	13
5. Melting Point to both pending group & wax	17
6. Variation of Viscosity with temperature of Heglig field crude oil	46
7. Variation of Viscosity with temperature of Unity field crude oil	47
8. Variation of Viscosity with temperature of El-Narr field crude oil	48
9. Variation of Viscosity with temperature of Toma South field crude oil	49
10. Variation of Viscosity with temperature of El-Toor field crude oil	50
11. Variation of Viscosity with temperature of Bamboo field crude oil	51
12. Gas Chromatograph of El-Toor Crude	52
13. Carbon Number distribution in Nile blend	53
14. Gas Chromatograph of separate wax from El-Toor Crude	54
15. Carbon Number distribution of wax separated from Nile blend	55
16. Differential Scanning Colorigram of El-Toor Crude	57
17. Differential Scanning Colorigram of Nile Blend Crude	58
18. Effect of Heat Treatment of Nile blend	61
19. Untreated Nile blend Viscosity in different temperature	62
20. Nile Blend Viscosity in different PPD Dosage	63
21. Yield Stress of Nile blend	65
22. Bamboo Process Flow	73
