

LIST OF FIGURES

Figure no	Figure name	page
1.1	PC based FLC temperature controller hardware	5
1.2	FLC temperature controller software block function	5
2.1	(A) Conventional (B) AI control design phases	15
3.1	Memberships function for a crisp set.	19
3.2	Linguistic values.	21
3.3	Membership function for a Fuzzy set.	22
3.4	Natural numbers closer to 5 membership function	23
3.5	Triangle membership function	25
3.6	Trapezoidal Membership function	25
3.7	A & B two membership function	26
3.8	Union operation $A \cup B$	26
3.9	Intersection operation	27
3.10	Complement operation	27
4.1	FLC components	31
4.2	Inference mechanism diagram	32
4.3	Fuzzifier diagram	33
4.4	Member ship function (mf)	34
4.5	Deriving fuzzy rule from observation of the process	39
4.6	Mamdani's max-min compositional operator	40
4.7	Defuzzification flow diagram	41
4.8	Center of area Defuzzification	42
4.9	Bisector of area method	42
4.10	Smallest of maximum	43
4.11	Largest of maximum	43
4.12	COM, MOM, SOM and LOM	43
5.1	Hardware schematic diagram	48
5.2	Printed Circuit Board (PCB) design	48
5.3	Embedded program flow chart	49
5.4	Heat up time response graph	50
5.5	FIS editor	51
5.6	MF of error	52
5.7	MF for output	53
5.8	Rule editor	54
5.9	FLC control loop flow chart	56
5.10	Enhancement MF	57
5.11	Enhancement rule base	58

6.1	Rule viewer zero error	60
6.2	Rule viewer big error	61
6.3	Surface viewer	62
6.4	Without control experiment	62
6.5	Initial design experiment result	63
6.6	Rule view for minimum error	65
6.7	Rule view for maximum error	65
6.8	Rule surface after redesign	66
6.9	Enhanced FLC experiment result	66
6.10	Result after tuning	67
6.11	PID output	68
6.12	FLC inside enclosure experiment	69
6.13	PID controller inside enclosure experiment	69
6.14	PID viruses Fuzzy	70
6.15	Fuzzy response to disturbance	71
6.16	PID response to disturbance	72
