■ TESTING METHOD

Test Circuit

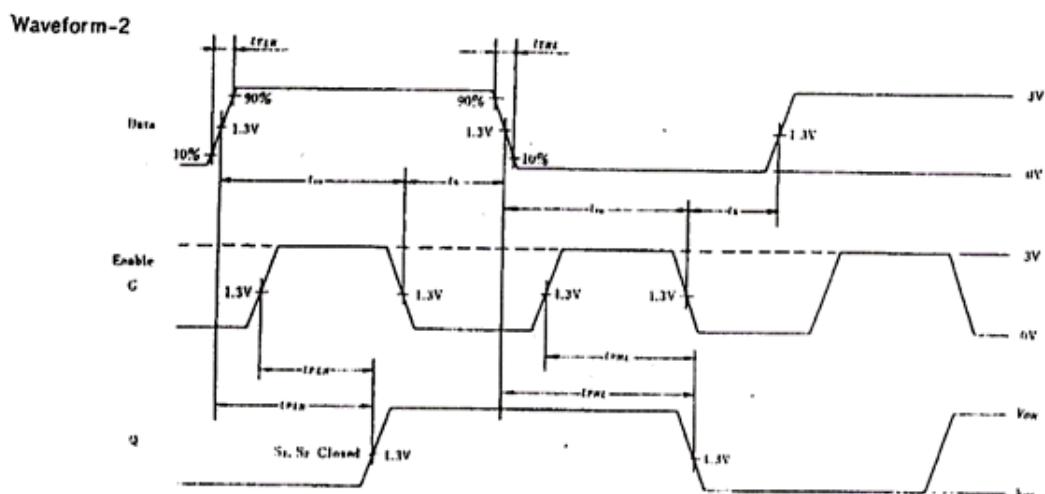

Notes: 1. C_L includes probe jig capacitance.
2. All diodes are 1S2074 (D).

HD74LS373

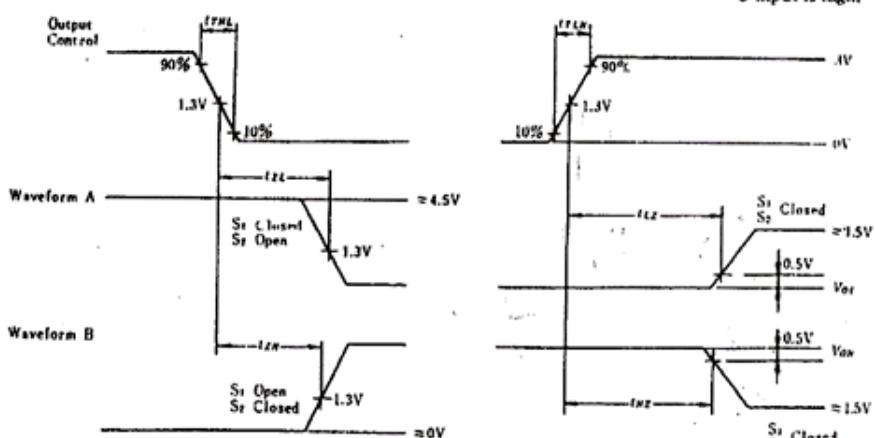

Notes: Input pulse: $t_{THH} \leq 15\text{ns}$, $t_{TTL} \leq 6\text{ns}$, PRR = 1MHz, duty cycle 50%

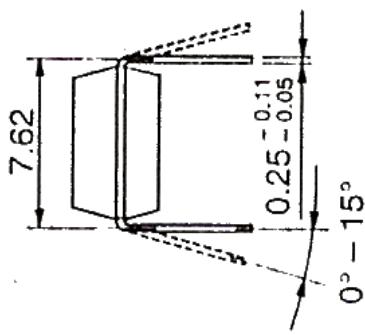

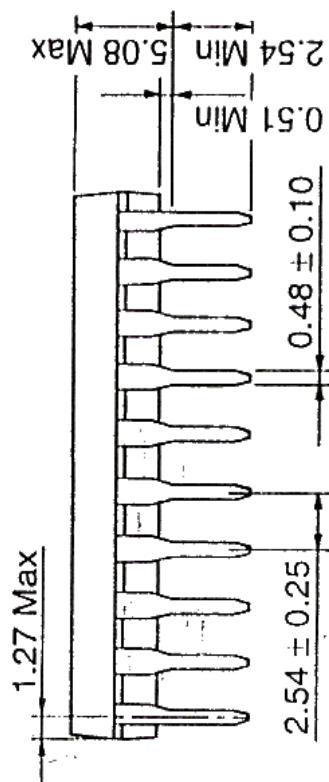

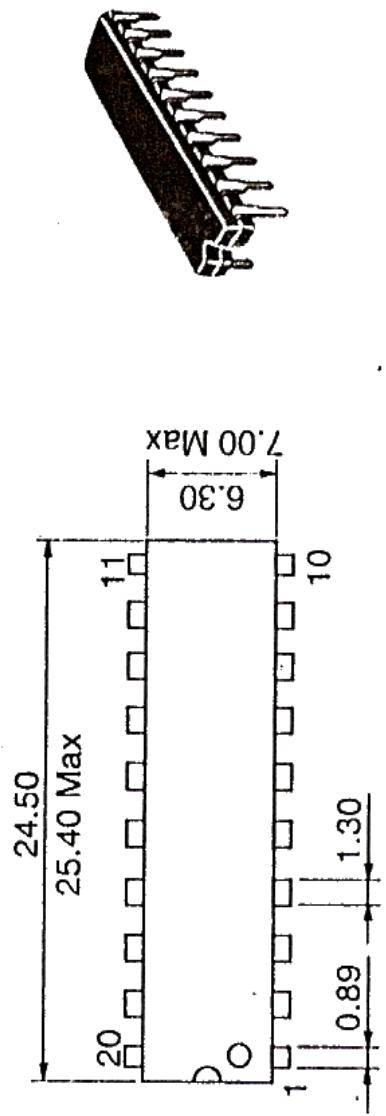

Note: Enable input pulse: $t_{TH} \leq 15\text{ns}$,
 $t_{TL} \leq 6\text{ns}$,
 $PRR = 1\text{MHz}$

Data input pulse: $t_{TH} \leq 15\text{ns}$,
 $t_{TH} \leq 6\text{ns}$,
 $PRR = 1\text{MHz}$,
 G input is high.

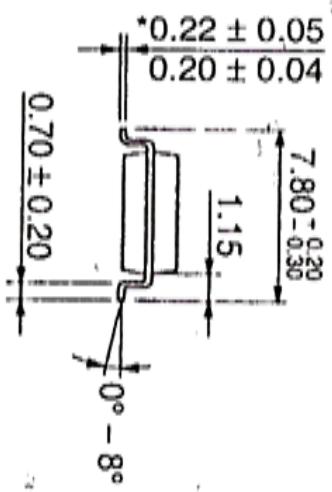

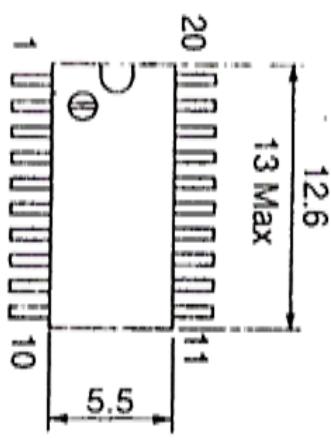

Notes: 1. Input pulse: $t_{TTL} \leq 15\text{ns}$, $t_{THL} \leq 6\text{ns}$, $PRR = 1\text{MHz}$, duty cycle 50%
 2. Waveform A is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform B is for an output with internal conditions such that the output is high except when disabled by the output control.

description/ordering information

The ULN2001A, ULN2002A, ULN2003A, ULN2004A, ULQ2003A, and ULQ2004A are high-voltage, high-current Darlington transistor arrays. Each consists of seven npn Darlington pairs that feature high-voltage outputs with common-cathode clamp diodes for switching inductive loads. The collector-current rating of a single Darlington pair is 500 mA. The Darlington pairs can be paralleled for higher current capability. Applications include relay drivers, hammer drivers, lamp drivers, display drivers (LED and gas discharge), line drivers, and logic buffers. For 100-V (otherwise interchangeable) versions of the ULN2003A and ULN2004A, see the SN75468 and SN75469, respectively.

description/ordering information (continued)

The ULN2001A is a general-purpose array and can be used with TTL and CMOS technologies. The ULN2002A is designed specifically for use with 14-V to 25-V PMOS devices. Each input of this device has a Zener diode and resistor in series to control the input current to a safe limit. The ULN2003A and ULQ2003A have a 2.7-k Ω series base resistor for each Darlington pair for operation directly with TTL or 5-V CMOS devices. The ULN2004A and ULQ2004A have a 10.5-k Ω series base resistor to allow operation directly from CMOS devices that use supply voltages of 6 V to 15 V. The required input current of the ULN/ULQ2004A is below that of the ULN/ULQ2003A, and the required voltage is less than that required by the ULN2002A.

absolute maximum ratings at 25°C free-air temperature (unless otherwise noted)[†]

| | |
|---|----------------|
| Collector-emitter voltage | 50 V |
| Clamp diode reverse voltage (see Note 1) | 50 V |
| Input voltage, V_I (see Note 1) | 30 V |
| Peak collector current (see Figures 14 and 15) | 500 mA |
| Output clamp current, I_{OK} | 500 mA |
| Total emitter-terminal current | -2.5 A |
| Operating free-air temperature range, T_A | -20°C to 70°C |
| ULN200xA | -40°C to 85°C |
| ULQ200xA | -40°C to 105°C |
| ULQ200xAT | -40°C to 105°C |
| Package thermal impedance, θ_{JA} (see Notes 2 and 3): D package | 73°C/W |
| N package | 67°C/W |
| NS package | 64°C/W |
| PW package | 108°C/W |
| Package thermal impedance, θ_{JC} (see Notes 4 and 5): D package | 36°C/W |
| N package | 54°C/W |
| Operating virtual junction temperature, T_J | 150°C |
| Lead temperature 1.6 mm (1/16 inch) from case for 10 seconds | 260°C |
| Storage temperature range, T_{STG} | -65°C to 150°C |

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. All voltage values are with respect to the emitter/substrate terminal E, unless otherwise noted.
2. Maximum power dissipation is a function of T_J (max), θ_{JA} , and T_A . The maximum allowable power dissipation at any allowable ambient temperature is $P_D = (T_J(\max) - T_A)\theta_{JA}$. Operating at the absolute maximum T_J of 150°C can affect reliability.
3. The package thermal impedance is calculated in accordance with JESD 51-7.
4. Maximum power dissipation is a function of T_J (max), θ_{JC} , and T_C . The maximum allowable power dissipation at any allowable case temperature is $P_D = (T_J(\max) - T_C)\theta_{JC}$. Operating at the absolute maximum T_J of 150°C can affect reliability.
5. The package thermal impedance is calculated in accordance with MIL-STD-883.

NOTES: A. The pulse generator has the following characteristics: PRR = 12.5 kHz, $Z_0 = 50 \Omega$.
 B. C_L includes probe and jig capacitance.
 C. For testing the ULN2001A, the ULN2003A, and the ULQ2003A, $V_{DH} = 3$ V; for the ULN2002A, $V_{DH} = 13$ V; for the ULN2004A and the ULQ2004A, $V_{DH} = 8$ V.

Figure 10. Latch-Up Test Circuit and Voltage Waveforms

ULN2001A, ULN2002A, ULN2003A, ULN2004A, ULQ2003A, ULQ2004A

The ULN2001A is obsolete
and is no longer supplied.

**HIGH-VOLTAGE HIGH-CURRENT
DARLINGTON TRANSISTOR ARRAY**
