SUDAN UNIVERSITY OF SCIENCE & TECHNOLOGY

College Of Graduate Study

Importance of Appling Quality Control in Elgadida X-Ray Department of K.T.H

Prepared By:

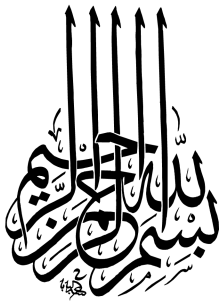
Huda Abdella Hamid

A Thesis Submitted For Partial Fulfillment Of M.Sc .Degree in Diagnostic Radiologic Technology

Under Supervision of:

Dr. Ibrahim A. Rahim Shaddad
Ph.D in Nuclear Physics

October 2004



قال تعالى:

صدق الله العظيم

To

My Parents …

My Sisters and Brothers …

My Teachers from whom I had benefited

greatly …

My Friends and Colleagues …

Subjects	**Page**
Acknowledgement	i
Abbreviations	ii

Abstract (English)	iii
Abstract (Arabic)	iv
List of Tables	v
List of Figures	vi
Chapter One	
Introduction	**1**
1.1. Quality assurance	2
1.2. Research objectives	4
1.3. The reasons of choosing this topic for research	4
1.4. Methodology	4
1.5. Hypothesis	5
1.6. Type of study	5
Chapter Two	
Literature Review	**6**
2.1. Quality assurance (QA)	6
2.1.1. Quality assurances in diagnostic radiology	6
2.1.2. Quality control (QC)	6
2.1.3. Radiographic quality control	7
2.1.3.1 Image quality control	7
2.1.4. Quality assurance programme (QAP)	8
2.1.5. Quality Administrative procedures (QADP)	8
2.1.6. Benefits of quality assurance program	9
2.1.7. Implementing a quality assurance program	9
2.1.8. The departmental QA Committee	10
2.1.9.The framework of a quality assurance program	11
2-2 Quality control program for radiographic units	16
2-2-1 Visual inspection	16

2-2-2 Environmental inspection 18
2-2-3 Performance testing 18
2-2-4 Reject Analyses 18
2-2-5 Radiation safety policies and procedures 22
2-2-5-1 Policy for holding patient 22
2-2-5-2 Policy for presence of individuals in the room during radiation Exposure 23
2-2-5-3 Policy for pregnant patients 24
2-2-5-4 Policy for pregnant Employees 24
2-2-6 Set of QC protocols are used for the x-ray diagnostic machines. Those protocols are including the following 25
2-2-6-1 Total radiographic system check for image quality 25
2-2-6-2 Consistency of radiation output using a digital KV meter 27
2-2-6-3 Consistency of radiation at different MA setting using a digital meter 29
2-2-6-4 Assessment of kilovotage applied to the x-ray tube using digital meter 30
2-2-6-5 Accuracy of exposure timer using a spinning top 32
2-2-6-6 Accuracy of exposure timer using digital timer meter 33
2-2-6-7 Assessment of focal spot size using focal spot test tool 35
2-2-6-8 Accuracy of collimation of the light beam diaphragm and x-ray beam alignment using the test tool 36
2-2-6-9 Accuracy of collimation when using non adjustable cones and diaphragm 38
2-2-6-10 Assessment half value layer (HVL) using test tool filtration 39

2-2-6-11 Assessment of grid alignment using test tool purpose 40
2-2-6-12 Assessment of the uniformity of a grid using grid movement test two 42
2-2-7 TESTS OF DARK ROOM 44
2-2-7-1 Cassette and screen identification 44
2-2-7-2 Assessment of screen film contact using wire mesh 45
2-2-7-3 Assessment of cassette lightness 46
2-2-7-4 Assessment of relative speed of intensifying screens for replacement 47
2-2-7-5 Processor quality control 49
2-2-7-6 Dark room fog check 56
2-2-7-7 Leakage testing and processing area condition 58
2-2-7-8 Film and chemical storage 59
2-2-7-9 View box Quality Control 59

Chapter Three

Methods & Experiments **62**
3.1. The equipment and procedure 62
3.2. Data collection 63

Chapter Four

Results & Discussion **67**
4-1. Results 67
4.1.1. Result of research questionnaires and direct interviewing 67
4.1.1.1. First questionnaire (for technologist) 67
4.1.1.2. Questionnaire No. (2) for Administrators and Engineers 68
4.1.1.3. Questionnaire No 3 for the Radiologist. 69
4.1.1.4. From all of three questionnaires 70
4.1.1.5. Implementing of quality control in Elgadida x-ray 70

department
4.1.1.6. Availability of test tools 71
4.1.1.7. Acceptance test of the machine in the department: 74
4.1.1.8. Training courses for the technologist in the department. 74
4.1.1.9. The present of radiation protection officer 74
4.1.1.10. Result of applying reject analysis in the department 74
4.1.2. Result of reject analysis 79
4.1.3. Testing of x-ray tube 83
4.1.3.1. KVP and time accuracy 83
4.1.3.2. Relative MA & MAS linearity (using the KVP meter) 84
4.1.3.3. MAS Consistency 84
4.1.3.4. KVP, time Reproducibility and linearity tests 85
4.1.3.5. Measurements of HVL of the x-ray unit 86
4.1.3.6. Check of Radiation field Accuracy of collimator and LBD 88
4.1.3.7. Focal spot size test 88
4.1.4. Testing of darkroom, cassette, intensifying screen and films 89
4.1.4.1. Test of light tightness of the darkroom 89
4.1.4.2. Safe light test 89
4.1.4.3. Testing of intensifying screen 90
4.1.4.4. Testing of cassettes 91
4.1.4.5. Test of films sensitometry 91
4.1.4.6. Test of manual processor 91
4.1.4.7. Test of grid alignment & movement grid 92
4.2 Discussion 93
4.2.1. Effect of implementing of some QA program to the 96

performance in Elgadida X-ray department
4.2.1.1. Meeting 96
4.2.1.2. Courses 97
4.2.1.3. Reject Analysis 97

Chapter Five

Conclusion & Recommendations **104**
5.1. Conclusion 104
5.2. Recommendations 105
