

# الآية

بسم الله الرحمن الرحيم

النَّهَارَ الْيَتِيمَ ۖ فَمَحَوْنَا آيَةَ اللَّيْلِ وَجَعَلْنَا آيَةَ  
الْجَنَّةِ لَاتَبْتَغُوا فِضًّا لَّا مِّنْ رَّبِّ رَاتِبَعْلَكُمْ ۖ وَآدَّ السَّيِّئِينَ  
كُلُّ شَيْءٍ فَصَّ لَانَاهُ تَفْصِيلًا ۖ

سورة الاسراء ﴿١٢﴾

# DEDICATIONS

*To my father and Mother*

*To my family*

*To students and engineers*

*To everyone can benefit from this research*

# ACKNOWLEDGEMENT

Thanks all thanks primarily to my father who has had the greatest role in my arrival to this degree. And thanks to my mother and family for their support to me through all my life. Many thanks go to the university administration because what did provide to us of chance and tender to obtain this degree .My thanks; gratitude and appreciation to my supervisor Dr. Awadalla Taifour for his support, assistance and guidance throughout the research. And thanks to my husband how is patronizing and support me to end this research, for him from me sincere thanks and gratitude.

# ABSTRACT

Speed control of DC motor provides easy controllability and high performance; the most flexible control is obtained by means of separately excited DC Motor. Literature was reviewed of related study to understand the separately excited DC Motor and fuzzy logic. Mathematical and computer models of a DC motor and fuzzy logic were developed. MATLAB was used for system simulation.

The motor without controller gives unacceptable steady state error and gives slow settling time for the output time response. With PID controller gets slower settling time when load increase, the best choice for this motor is the fuzzy controller which has given good response after adjustment of its parameters.

## مستخلص

يتم التحكم في محرك التيار المستمر لتسهيل التحكم و انتاج اداء العالي ويتم الحصول على تحكم أكثر مرونة عن طريق محرك التيار المستمر منفصل الاثارة.تم مراجعة دراسات مشابهة لفهم محرك التيار المستمر منفصل الاثارة و فهم المنطق الغامض. تم ايجاد نموذج رياضي و حسابي لمحرك التيار المستمر. استخدام برنامج الماتلاب لنمذجة النظام.

المحرك بدون إستخدام متحكم اعطى خطأ حالة مستقرة غير مقبول و اعطى زمن استقرار بطئ للاستجابة الزمنية للخرج. وفي حالة المتحكم التناسبي التفاضلي التكاملي تم الحصول على زمن استقرار ابطئ عند زيادة الحمل, أفضل خيار لهذا المحرك هو المتحكم الغامض حيث أعطى إستجابة زمنية جيدة بعد أن تم ضبط معاملاته.

PREFACE.....	Xv
--------------	----

## CHAPTER ONE: INTRODUCTION

1.1 Introduction.....	1
1.2 Statement of Problem.....	1
1.3 Objective.....	2
1.4 Methodology/Approach .....	2
1.5 Layout .....	2

## CHAPTER TWO GENERAL OVERVIEW

2.1 Introduction.....	3
2.2 DC Machines.....	3
2.2.1 Main Part of DC Machine.....	4
2.2.2 DC Machine Operation.....	5
2.3 DC Motor.....	6
2.3.1 Applications.....	6
2.3.2 Principle of Operation.....	6
2.3.3 DC Motor Method.....	7
2.4 Separately Excited DC Motors.....	7

2.4.1 Operation.....	8
2.4.2 Represent Equations.....	8
2.4.3 Torque Characteristic.....	9
2.4.4 Control of Speed.....	9
2.5 PID Control.....	11
2.5.1 The PID Controller Algorithm.....	12
2.5.2 Tuning of PID Parameters.....	13
2.6 Fuzzy Control.....	14
2.6.1 General Features.....	15
2.6.2 Fuzzy Inference Systems.....	16
2.6.3 Fuzzy Controller.....	16
2.6.4 Process of Developing a Fuzzy Expert System.....	23
2.6.5 Tuning Fuzzy Systems.....	24
2.7 Loads.....	24
2. 7.1 Load Type.....	24
2.7.2 Overload Operation.....	26
 <b>CHAPTER THREE: CONTROL SYSTEM DESIGN</b>	
3.1 Introduction.....	27

3.2 Separated Excited DC Motor Modeling.....	27
3.3 Controller design for motor speed control system.....	31
3.3.1 The Input and Output for the System.....	31
3.3.2 PID Controller Design.....	31
3.3.3 Design of Fuzzy Controller.....	33

## **CHAPTER FOUR: SIMULATION RESULTSAND DISCUSSIONS**

4.1 Introduction.....	41
4.2 Motor Simulation Results without Controller .....	41
4.2.1 Result for motor response at no-load.....	42
4.2.2 Result of motor response at 75% of load.....	43
4.2. Result of motor response at Full Load .....	43
4.3 System Simulation Results with PID Controller .....	44
4.3.1 System result with PID controller at no-Load .....	44
4.3.2 System result with PID controller at 75% of Load .....	44
4.3.3 System result with PID controller at full load.....	44
4.4 System Simulation Result with Fuzzy Controller .....	47
4.4.1 System result with PID controller at no-load .....	47
4.4.2 System result with PID controller at 75% of load .....	48
4.4.3 System Result with PID controller at full load.....	48

4.5 Results Comparison and Discussions .....	50

# LIST OF ABBREVIATIONS

AC	Alternating Current
DC	Direct Current
EMF	Electro Motive Force
FIS	Fuzzy Inference System
FL	Fuzzy Logic
FLC	Fuzzy Logic Controller
FLS	Fuzzy Logic System
GUI	Graphical User Interface
MATLAB	Matrix Laboratory
MMF	Magnetic Motive Force
PID	Proportional Integral Derivative

# LIST OF SYMBOLS

$T_L$	Load torque
$T_d$	developed torque
$I_f$	field current
$I_a$	armature current
$v_a$	armature voltage
$R_a$	armature resistance
$L_a$	armature inductance
$\omega$	angular speed
$J_m$	rotor inertia
$B_m$	viscous friction coefficient
$K_T$	torque constant
$K_b$	back EMF constant
$\phi$	Magnetic flux
$K_p$	proportional gain
$T_i$	integral time constant
$T_D$	derivative time constant
$K_i$	integral gain
$K_d$	derivative gain
$K_u$	ultimate gain
$T_u$	ultimate period
$k$	static gain
$\tau$	time constant
$\theta$	time delay
$K_I$	integral constant
$T_s$	sampling period
$C_e$	change in error
